Data Types

Data Frame

it stroe value in form of table and multiple class

```
family = data.frame("name" = c("hitesh","gajuji","Manjulaben","Rashmika","Kamakhya"),"Relation" = c("Sel

View(family)

print(family)
```

excample

```
##          name Relation age occupation
## 1      hitesh     Self  22    Student
## 2      gajuji   Father  50     Farmer
## 3 Manjulaben   Mother  48  Housewife
## 4   Rashmika   Sister  30  Housewife
## 5   Kamakhya    Bhani   3         NA
```

```
name <- c("Hitesh","Gajuji")

age <- c(22,50)

occupation <- c("student", "Farmers")

data_frame_1 <- data.frame(name,age,occupation)

print(data_frame_1)
```

how to create data rame using vectors

```
##      name age occupation
## 1 Hitesh  22    student
## 2 Gajuji  50    Farmers
```

```
str(data_frame_1)
```

how to convert data frame to str

```
## 'data.frame':    2 obs. of  3 variables:
##  $ name      : chr  "Hitesh" "Gajuji"
##  $ age       : num  22 50
##  $ occupation: chr  "student" "Farmers"
```

```
data_frame_1 <- data.frame(name,age,occupation, stringsAsFactors = T)
